

HYGIO[®]

Helppoa hygieniaa

Hygio removes odors and disease transmitters

Hygio a40 processing chamber is a new Finnish innovation.

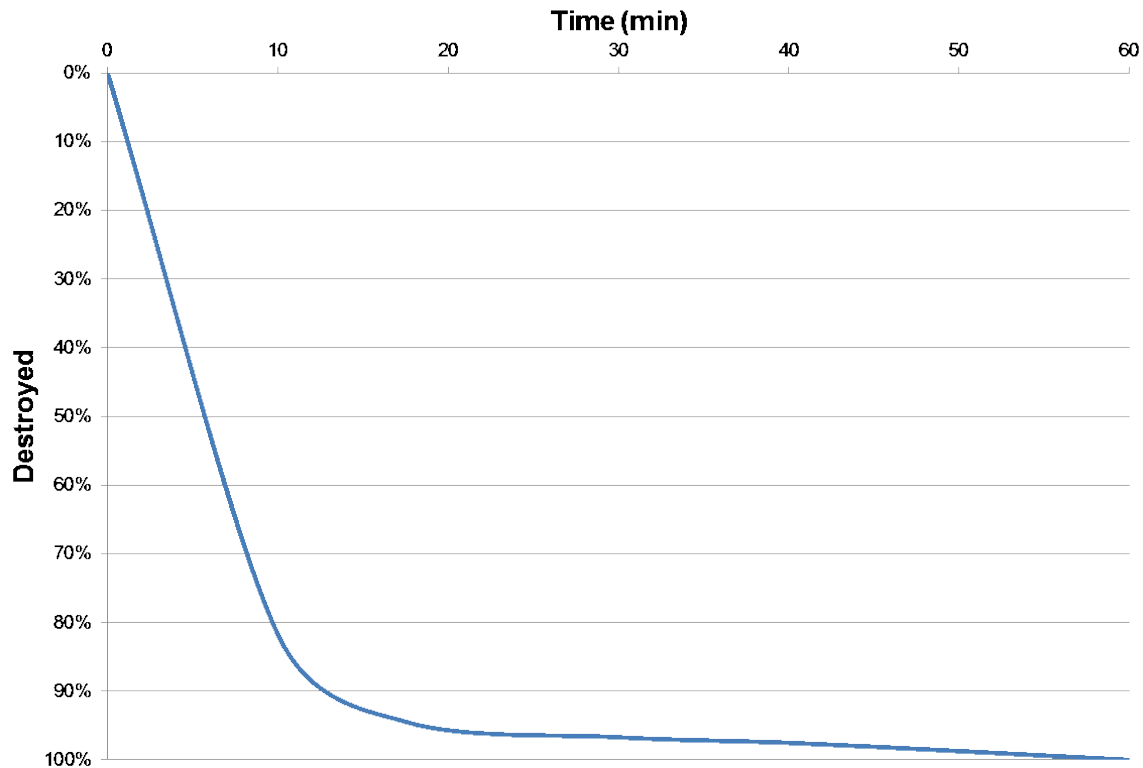

Ozone processing takes place in a closed space safely, quietly and energy-efficiently.

Processing refreshes and disinfects textiles, materials and equipment effectively and quickly.

As result, odors are removed and pathogens destroyed.

HYGIO®

- Ozone eliminates efficiently bacteria, viruses, mold and fungi spores. Also yields are eliminated.

Example:
e-coli population is reduced in one hour
99,9993%.

Applications

Hospitals and medical centers use Hygio for complementing conventional disinfection methods.

Ease of use motivates to frequent use of the device, contributing efficiently to improved hygiene level.

Kindergardens use Hygio for limiting the amount of infections among children.

HYGIO[®]

Applications

Ozonizing helps authorities and security organizations to develop the hygiene level as seen by their personnel and by their customers.

You can rid of unpleasant odors and control effectively contaminations that may threaten the staff's health and wellbeing. Hygio removes also remains of aromatic hydrocarbons from protective gear.

HYGIO[®]

Applications

In sports and exercise venues, an ozone device is a great way to improve and diversify customer service. Hygio can be used to freshen up one's equipment quickly and easily. Exercise mats and other group exercise equipment can also be cleaned effectively.

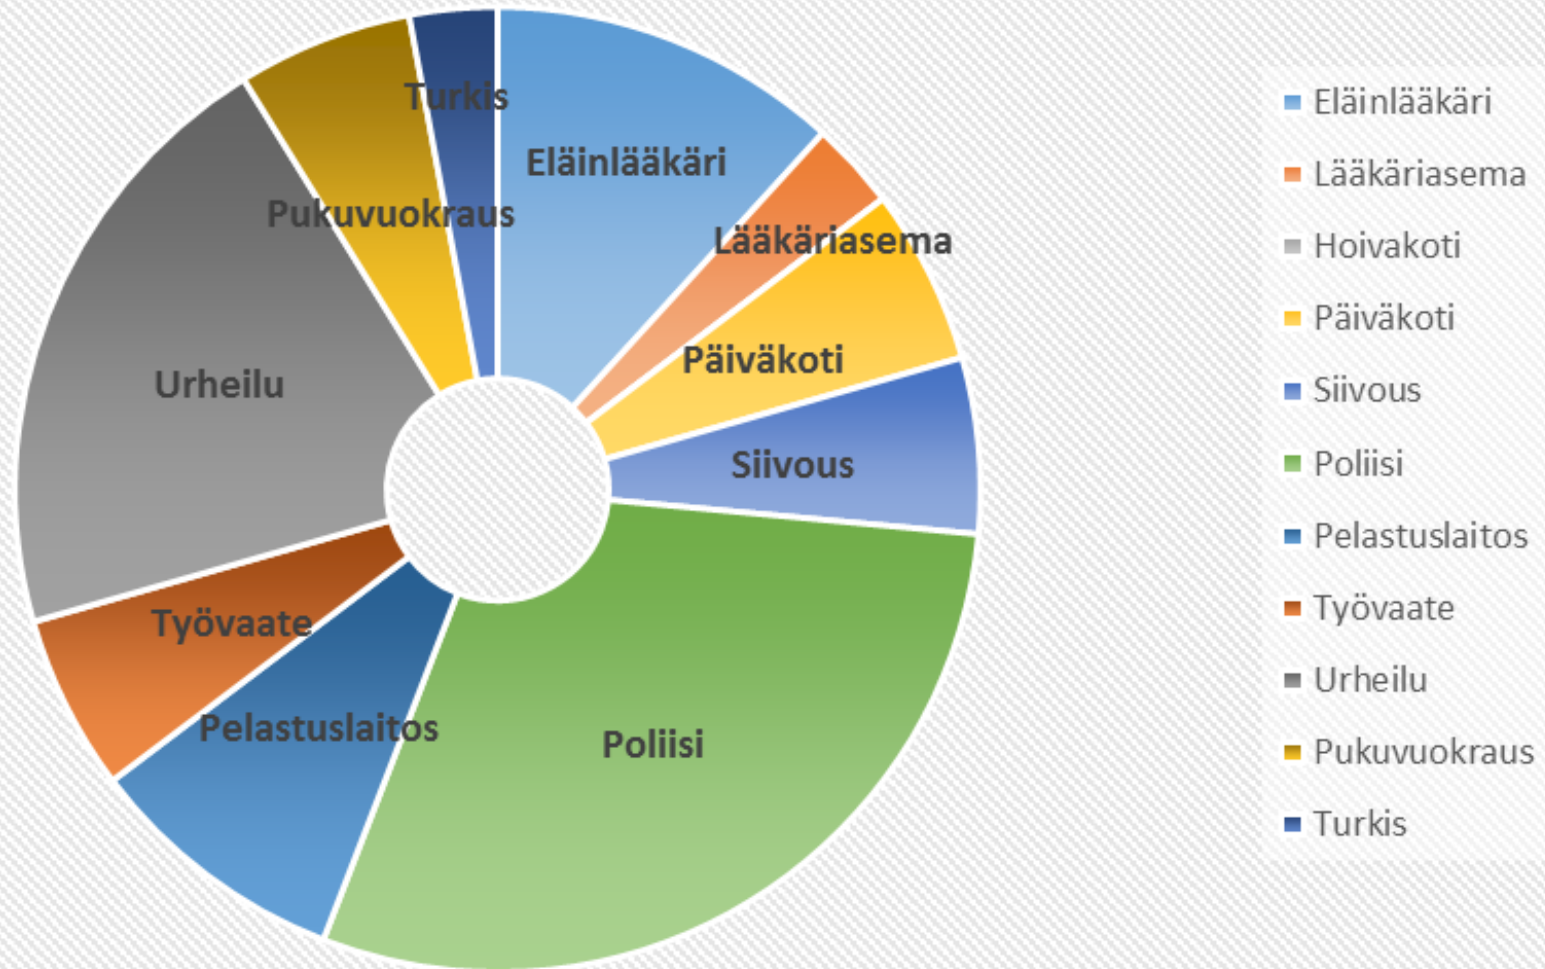

In martial arts and motor sports, helmets and protective gear are in constant skin contact. Similarly, bowling, golf, dancing, downhill skiing and football are all types of sport where shoes wear down easily and one sweats profusely.
