

Copper Gutters and Downspout

GutterAndDownspoutSupply.com is the new national distribution effort of Chris Industries, Inc. Chris Industries has been the leader in architectural copper distribution throughout Chicagoland and the Midwest, and has been a benchmark for copper fabrication and roll forming services for the industry.

In 1974, a Chicagoland non-ferrous metal service center spun off a division of itself to meet the increasing demand it was receiving for copper architectural sheet metal products. The new company, Chris Industries, would service the roofing, sheet metal, h.v.a.c., and the general construction industry around the greater Chicago area.

In the beginning Chris carried only copper products, earning a reputation as Chicago's one-stop copper shop. Over time Chris added materials like aluminum, galvanized, kynar material, and stainless steel to its stock inventory. And with the addition of other metals, Chris soon had a full line of architectural sheet metal products it offers its customers.

As Chris grew, it expanded to southern Illinois, Wisconsin, Indiana and Iowa. In the late 80's, Chris added a fabrication department to complement its full service distribution efforts. The addition allowed Chris to supply flashings in a quick, cost-effective manner. As the fabrication department grew, Chris added state-of-the-art fabrication equipment to increase its capacities.

3" Plain Round / Smooth Copper Downspout

3" Plain Round / Smooth Copper Downspout 10' sections Make your home beautiful with copper gutters. If properly installed a copper gutter systems should last 80 to 120 years under normal conditions.
