

**A KNOWLEDGE TO MAKE  
OF GOOD SENSE  
THE RECYCLING OF WATER**

**To support  
BANK FOOD**

**“BIOLOGICAL PIT” lyseconcept**

## **Context**

*Of with dimensions:* Increase in a poor population which more particularly undergoes the effects of the world-wide crisis.

The job loss pushes in the street certain people prepared at all with this situation.

The Food Bank suffers from the fall of the gifts of food, of the fall of the gifts of money, the reduction of financing by the large money-lenders

*Other:* Cultivable grounds with the abandonment pertaining at the Communities. The drinking water shortage. Polluted water tables. The job loss of people who find themselves in margin of the economic and social company.

*In parallel:*

An increasingly important drinking water consumption

## **The proposal of lyseconcept**

Development of an Ecological and Biological Economic solution to fight against the hunger as well as buildings job creation. The honourable reintegration in the civil society.

## **Methodology applied**

- Owners of septic tanks take part in the program of the Food Bank by giving their Biological wastewaters free. Administration the exemption of the regulation of the tax of cleansing. A small electrical motor van is arranged to transfer these wastewaters until the “Pilot Site” in the process from treatment installed to the accesses of the ground in culture. The water rejection at exit of the process disperses on the exploitation because of the need for watering.
- A small habitat is arranged on ground for the monitoring of the exploitation equipped with solar panels to provide electricity to guarding.
- The agronomic production of fresh produce is booked exclusively for a part with the blue-collar workers of the farm of the Food Bank, the other part being sold for a moderate amount the most stripped with. The collected money will be used with the renewal of the cultures of the farm but also for the establishment of other agricultural sites on the same model.

## **Objectives**

- To provide “Fresh” food in abundance to the local Food Bank for a local population in the need.
- To give again a human dignity with farm “labourer the volunteers”.

TOULON Le 2 Mai 2013

- It surplus of fresh produce will be directed towards hospitals, orphanages or why not worms of the schools of nursery school and primary education of small village.
- A solution with the problems of the cleansing, which rejects its waste waters in the natural environment for a share and which produces mud residues generating of expensive and polluting the palliatives treatment for another share.
- The insurance for the community that the installations of Individual Cleansing function properly and under monitoring.
- A reduction of the financial costs of treatment of waste waters for as many pits, which would not be drained any more, and their contents transferred towards the sewage treatment plant.
- It district rural would see arid grounds reverdir and as zone of fire hazard this space of greenery would act like a share fire.
- Them grounds put in culture would ensure a certain ventilation of the ground and under ground, supporting the pre infiltration of rain waters during strong precipitations and moving back of as much the moment of the flood.
- Them elected representatives of common interested parties by the PROJECT of the Food Bank could set up the same program for the agronomic benefit booked at most underprivileged of the village.
- In correlation of spirit of the “resto du coeur”.

## SYNTHESIS

It is a societal project, humanitarian, medical, of health, of employment, ecological, economic, biological, of town planning, food.

The objective is to answer the local requests of food by a local agronomic production of “expenses biological”.

Voluntary carriers could also lead its fresh produce of surplus towards areas “applicant” always within the limit to keep its fresh produce.

This program will reduce the subsidies granted to the most stripped local associations of assistance to.

From the organic farming point of view, the program will develop a local biological sector.

The biological cleansing and its virtues will be able to open local outlets of market.
