

EDI Training and Interchange Services | Data Communication Solutions

Providing Consulting Services Since 1991

DCS has helped over 500 companies with their EDI and ERP systems so they can become self-reliant.

DCS Focuses Exclusively On Business-to-Business Data Interchange

Successful companies have implemented supply-chain concepts by choosing components that are best suited to their unique way of doing business. The goal of DCS is to help you improve your supply-chain processes. Your existing EDI and ERP systems are the best foundations upon which to build. The challenge is to connect to customers, transporters, and vendors in the most economical yet efficient method.

Since 1991 DCS has focused exclusively on business-to-business complexities, helping you quickly, economically, and thoroughly. Over 500 companies have improved their process and became more self-reliant with DCS help. For a short list of some of the companies that have benefited from our EDI consulting, [view list of our customers.](#)

The DCS Mission Statement

DCS helps improve its customers' competitive position by delivering appropriate and timely EDI and B2B solutions to meet its customers' business challenges. From assessment, planning, mapping, installation, and training, to maintenance, DCS helps its customers excel.

Future Planning

DCS can help you plan for next year. DCS provides a [FREE 2-hour remote assessment](#) giving you a straight-forward assessment, mini-report and budget estimate based on our extensive experience with EDI. We help you take the guesswork out of the multitude of alternatives and choices so that you can concentrate on your day-to-day business. [Click here](#) to learn more on how we can help you plan.

EDI Systems

**Deep Experience With
Your EDI System**

EDI processes must perform properly every day to insure that your key customers are satisfied.

Delivering Successful EDI Solutions since 1991

Data Communication Solutions (DCS) can help you overcome all your EDI and e-commerce challenges, whether classical EDI (X12 or EDIFACT) or standardized XML (GS1 or OAGi). DCS EDI Specialists has successfully installed, mapped, and operated nearly all EDI systems. We are ready to help you: when you need us, for as much as you need us.

Our EDI support and training is thorough, quick, and economical due to our many years of support with numerous EDI systems. Your process automation will be effective, reliable, fast, secure and economical because our expertise is the highest around. Most importantly, you will have the domestic personal service you need for highly visible EDI. Contact us for a FREE assessment and learn how DCS can meet your EDI needs.

ERP Systems

Our EDI experience with hundreds of ERP conversions and upgrades can speed up the conversion process and avoid the many embarrassing pitfalls that can arise. DCS knows that your customers will not tolerate disruptions in EDI as you convert to a new business application. Best of all, DCS will teach you to become self-reliant in managing your automated EDI processes.

Overview

Business application upgrades are typically time intensive; just when you have many other conversion details upon which to focus EDI problems surprise you. Unfortunately, EDI and AS2 systems do not automatically link to business applications, so you need thorough configuration and testing. For example, when developing new maps or making changes, DCS will perform testing until your customers and internal users approve individual documents.

The costs of converting are the generic map development, customization for each customer or Trading Partner, testing, and training both users and the I.T department. Learn more how we can assist you with our FREE assessment.
